CIRRUS PERSPECTIVE™ SEES EVEN MORE CLEARLY WITH ENHANCED VISION SYSTEM (EVS)

MULTI- SENSOR EVS SETS NEW STANDARDS

San Jose, CA (November 6, 2008) Cirrus Design Corporation, a recognized global leader in the manufacturing of personal aircraft, announced today at the Aircraft Owners and Pilot's Association (AOPA) EXPO, that Perspective EVS, an Enhanced Vision System, is now available for customer installation on SR20, SR22 and Turbo aircraft.

Perspective EVS is based upon the Max-Viz EVS-600 multi-sensor system that blends visible light with traditional infra-red imagery. Perspective EVS offers advantages to pilots during virtually all phases of their flight: taxi; take-off and climb; en-route; approach and landing. In particular, "seeing" clouds at night and avoiding potential icing conditions, turbulence or thunderstorms is invaluable with the new system.

Cirrus Chairman and CEO Alan Klapmeier noted, "The capability of the SR20, SR22 and Turbo has changed the way Cirrus owners use their aircraft. Perspective EVS adds another dimension of safety for night operations."

"This complements and builds on Garmin's Synthetic Vision Technology - which shows what should be there ... now Perspective EVS shows you what is really there," Klapmeier continued.

Lou Churchville, Vice President, Business Development of Max-Viz added, "By sponsoring the initiative to migrate high-end EVS technology into the SR-series of aircraft, Cirrus once again demonstrates its innovative leadership. Max-Viz is proud to be the EVS supplier of choice for Cirrus aircraft."

Perspective EVS is priced at \$14,900 and available only on the 12-inch Garmin screens.

Cirrus is offering all owners of the more than 200 Cirrus Perspective-equipped aircraft in the fleet that same price, including installation, for kits ordered before the end of 2008. All SR22 and Turbo aircraft equipped with Cirrus Perspective have provisions made for easy installation targeted to take less than two hours.

About CIRRUS

CIRRUS is a recognized global leader in the manufacturing of personal aviation aircraft that provide unprecedented levels of performance, quality and safety. Their popular SR20 and SR22 composite airplanes incorporate innovative advanced technologies into their design, including the unique CIRRUS Airframe Parachute System (CAPS™). CIRRUS has a direct sales force in North America with sales centers across South and Central America, Europe, China, Australasia, South Africa, Mexico, and the Caribbean.
